SPECIALISTS IN TRADITIONAL IRONMONGERY

THE COLLECTION

2018 EDITION

INTRODUCTION

We are proud to introduce 'From The Anvil' ironmongery and lighting. We are specialist manufacturers of traditional window, door and cabinet fittings with over eighteen years' experience in the industry.

Throughout our brochure you will find over two thousand product lines in an extensive array of finishes that will enable the complete furnishing of any type of property, both residential and commercial.

Our brochure is supported with an extensive library of information, including; topical articles, inspirational case studies, image galleries, technical information, finish information and fitting advice.

We continue to develop our range year on year and feel that our latest brochure reflects our journey to date and highlights our ever growing design talent and manufacturing knowledge.

We hope that you will enjoy browsing through our brochure as much as we have enjoyed compiling it!

ABOUT US

Nestled in hills close to the Welsh marches, the heart of 'From The Anvil' beats on the edge of Llandrindod Wells, the county town of Powys.

Our broad site houses a large showroom, offices, warehouses, workshops, a manufacturing & finishing plant and our design hub.

Our extensive setup allows us to hold a vast stock, enabling us to achieve swift delivery times and fulfil the requirements of a wide-ranging client base.

We have a network of dedicated stockists throughout the UK who stock, display and promote the From The Anvil product range on our behalf. Our service allows our stockists to obtain all From The Anvil products on a next day delivery.

Many years of experience and a wealth of ingenuity have established From The Anvil as an accomplished manufacturer of high-end ironmongery, specialising in the manufacturing of products made from mild steel, solid brass and solid bronze.

Our ironmongery fits in to an extensive variety of property types ranging from traditional to contemporary and promises to enhance both large and small building projects alike.

WHAT MAKES US UNIQUE?

Forging mild steel and hot forging from brass are the two key production methods behind our collection of ironmongery and are what makes From The Anvil unique.

The From The Anvil journey began eighteen years ago with around fifty purely traditional products. These products were hand-forged from mild steel on a blacksmith's anvil and dipped into hot beeswax achieving a wholly authentic finish. Our hand-forged range has since developed considerably but these first product lines remain amongst our best-selling items. Still using mild steel as the core material, we now mix CNC technology and hot forging with traditional anvil hammer work. With the introduction of items such as hand-forged door stops, curtain finials and cupboard knobs, we now offer the largest selection of traditional handmade ironmongery in the UK.

As the needs of our customers have changed and become more varied so have our methods and manufacturing processes. Using our expertise in design and in-depth product knowledge we have now begun producing ironmongery using alternative materials and manufacturing techniques. The introduction of solid brass, bronze and wood has enabled us to create a greater product choice and reach other more contemporary and urban properties. Our ironmongery can now be found in a variety of building types throughout the UK, Ireland and Europe.

From The Anvil is a unique and forward thinking company and we are proud to offer an exclusive range of top quality ironmongery in a variety of traditional and contemporary finishes. We continue to focus on quality manufacturing, producing beautiful, functional products which are honed to the highest specifications and unsurpassed by others.

THE BLACKSMITH COLLECTION

The majority of our products in the blacksmith collection are forged by hand from solid steel. The hammer marks left by our master craftsmen add character and charm and make each item unique. There is a pure simplicity to this collection and the traditional product types lend themselves to buildings of a historic nature. The authenticity and depth of colour in our beeswax products mean that they are perfectly at home in the warmth of a country cottage. Our black ironmongery is hardwearing and works well in a farmhouse setting and our signature pewter finish contrasts beautifully with the timber interior of a barn conversion.

THE PERIOD COLLECTION

The ironmongery in our period collection has been designed to reflect Britain's great architectural heritage. The products have been refined to the highest specification and have a timeless elegance. Our aged brass and solid bronze items can be highly polished or left to tarnish with age and are perfect for use in a Victorian terrace or Georgian townhouse for example. Our chrome and nickel ironmongery sits well in a contemporary setting with its high shine finish that complements modern interiors, adding a touch of sophistication.

2018 PRODUCT FINISHES

For detailed guides to maintaining products see pages 243-245

BLACKSMITHS FINISHES

Beeswax Finish - (For Internal Use Only)

Our beeswax finish is the most authentic finish for steel. When forging has finished the colours left in the steel range from blue to deep red ochre. To preserve these beautiful colours we recommend periodically maintaining this with our beeswax maintenance wax. This gives a subtle, matt richness to the metal and offers excellent protection when products are fitted internally and properly maintained.

External Beeswax Finish - (For Internal or External Use)

Our external beeswax is unique to From The Anvil and is manufactured from a anti-corrosive beeswax. It has a matt richness and similarly to our standard beeswax the depth of colour ranges from blue to deep red ochre. To preserve these beautiful colours we recommend periodically maintaining this with our beeswax maintenance wax. This finish has been salt tested to 480hours, which meets grade 5 British Standard.

Black Finish - (For Internal or External Use)

Our black finish is baked in a high-temperature oven giving it a durable corrosion resistant finish. It is resistant to moisture and can be used in bathrooms and damp conditions. This finish has been salt tested to 480hours, which meets grade 5 British Standard. Wiping with a lightly oiled cloth from time to time will remove harmful deposits and maintain its original condition.

Black Antique Finish - (For Internal or External Use)

Our antique black finish is more textured than our standard 'black finish' due to the cast manufacturing methods used during production. The finish remains the same and is also baked in a high-temperature oven giving it a durable corrosion resistant finish. This finish has been salt tested to 480hours, which meets grade 5 British Standard. Wiping with a lightly oiled cloth from time to time will remove harmful deposits and maintain its original condition.

Pewter Patina Finish - (For Internal or External Use)

Our pewter finish is elegant and beautifully highlights the texture of the steel. The unique and complex process runs deep into the metal resulting in an unmatched contrast of texture and colour. This finish has been salt tested to 480hours, which meets grade 5 British Standard. It has excellent anti-corrosive properties but we recommend that this finish is wiped with a lightly oiled cloth from time to time which will remove harmful deposits and maintain its original condition.

Antique Pewter Finish - (For Internal or External Use)

The antique pewter finish is a complicated process applied to a solid brass base metal, giving excellent anti-corrosive properties. Wiping with a lightly oiled cloth from time to time will remove harmful deposits and maintain its original condition.

Bronze Finish (Steel Base Material) - (For Internal or External Use)

Mild steel coated with a permanent bronze finish which is weatherproof and will maintain its rich glossy finish for years to come. This finish is elegant and beautifully highlights the rustic and distinctive qualities of the handforging process. It has excellent anti-corrosive properties but we recommend that this finish is wiped with a lightly oiled cloth from time to time which will remove harmful deposits and maintain its original condition.

Natural Smooth Finish - (For Internal Use Only)

A natural cast iron, finished with a clear matt lacquer which is only intended for internal use. This also produces a beautifully smooth look and feel with subtle highlights from the base metal. We recommend that this finish is wiped with a lightly oiled cloth from time to time which will remove harmful deposits and maintain its original condition.

Natural Textured Finish - (For Internal Use Only)

A textured cast iron, finished with a clear matt lacquer which is only intended for internal use. If fitted in an enclosed porch/bathroom it will need to be treated with maintenance wax periodically to help protect the iron from any moisture. We recommend that this finish is wiped with a lightly oiled cloth from time to time which will remove harmful deposits and maintain its original condition.

Iron Finish - (For Internal or External Use)

Made from solid iron, exhibiting the natural beauty and texture of the metal. It is cast and finished with a clear powder coating to protect the iron from weather and moisture, this also gives it a rich colour. Wiping with a lightly oiled cloth from time to time will remove harmful deposits and maintain its original condition.

PERIOD FINISHES

Polished Brass Finish - (For Internal or External Use)

Our polished brass products are made from solid unlacquered brass. Regular polishing with a good quality metal polish is recommended to maintain the original highly polished finish. However, if the intention is to allow the surface to age through oxidization, no attention needs to be given. Over time the brass will acquire a darker and more aged patina. This finish has been salt tested to 480hours, which meets grade 5 British Standard.

Aged Brass Finish - (For Internal or External Use)

Our aged brass products are made from solid unlacquered brass which undergoes an accelerated ageing process and is then re-polished, leaving any decorative details dark and larger surface areas more polished. If the intention is to allow the surface to age, no attention needs to be given. Over time the brass will acquire a darker and more aged patina. However polishing with brasso will give the product a natural sheen where required. This finish has been salt tested to 480hours, which meets grade 5 British Standard.

Aged Bronze Finish - (For Internal or External Use)

This finish is manufactured from solid unlaquered bronze containing a minimum of 85% copper. Our aged bronze is matt and rich due to the finishing process we use to age the metal, this process initially darkens the material, however this finish will gradually oxidize over time revealing the warm copper undertones. Lightening the finish can be accelerated by hand-polishing with a heavy dry cloth. This finish has been salt tested to 480hours, which meets grade 5 British Standard.

Polished Chrome Finish - (For Internal or External Use)

A highly polished finish which reflects like a mirror. A base metal of solid brass or steel with quality chrome plating applied to its surface. We recommend that this finish is wiped with a lightly oiled cloth from time to time which will remove harmful deposits and maintain its original condition. This finish has been salt tested to 480hours, which meets grade 5 British Standard.

Polished Nickel Finish - (For Internal or External Use)

A highly polished finish with a nickel plating applied to solid brass. Our polished nickel is unlacquered and is similar to a polished chrome finish but with much warmer tones. This finish has been salt tested to 480hours, which meets grade 5 British Standard. Wiping with a lightly oiled cloth from time to time will remove harmful deposits and maintain its original condition.

Satin Chrome Finish - (For Internal or External Use)

Satin chrome offers a subtle alternative to polished chrome and is a popular choice where a matt appearance is required. A base metal of solid brass or steel with quality chrome plating applied to its surface. We recommend that this finish is wiped with a lightly oiled cloth from time to time which will remove harmful deposits and maintain its original condition. This finish has been salt tested to 480hours, which meets grade 5 British Standard.

WOODEN FINISHES

Ebony Finish - (For Internal or External Use)

Ebonised to have a rich, dark hue, a very high density and fine texture which gives a very smooth finish. Polish or wax to maintain the wood and to give overall protection. This finish can be used externally if maintained with anvil maintenance wax & wiped with a lightly oiled cloth from time to time. This will also aid the removal of harmful deposits.

Rosewood Finish - (For Internal or External Use)

Rosewood has a richly hued reddish colour with much darker veining. Polish or wax to maintain the wood and to give overall protection. This finish can be used externally if maintained with anvil maintenance wax & wiped with a lightly oiled cloth from time to time. This will also aid the removal of harmful deposits.

PENNY END T HINGES

When opened, a tee hinge has the appearance of a letter 'T'. An alternative to butt hinges, tee hinges are usually used in conjunction with a suffolk latch on traditional plank doors. They can also be used on cupboard doors or kitchen cabinets.

Our blacksmith tee hinges are hammered into shape from mild steel using the traditional manufacturing method of an anvil and fire. Once the mild steel T hinge has been hand forged it is finished in our factory in our available finishes, which includes beeswax, external beeswax, black powder coated or pewter patina. The end result is a strong, beautifully detailed product ideal for any traditional project.

4" T HINGE (PAIR)

Overall Length: 102mm
Hinge Arm: 80mm
Fixing Plate: 82mm x 16mm

- Sold with matching wood screws.
- Supplied as a pair.

● 33188	● 33986	● 33650
BEESWAX - £16.50	BLACK - £17.64	PEWTER - £22.36

6" T HINGE (PAIR)

Overall Length: 152mm
Hinge Arm: 110mm
Fixing Plate: 102mm x 16mm

- Sold with matching wood screws.
- Supplied as a pair.

● 33154	● 33987	● 33788

STORMPROOF & FRICTION HINGES

Typically used in the construction of casement windows, stormproof hinges provide the best solution for rebated windows, offering a fantastic weatherproofing system.

Friction hinges have many modern applications and can be used on many types of material including upvc and timber to provide a smooth hinged opening, eradicating any resistance from the pivoting motion. When installing a friction hinge the weight and length from the point of pivot of the window needs to be known.

A durable product that will keep a window open even in the strongest winds.

2 1/2" STORMPROOF HINGE (PAIR)

Height: 63mm
Leaf Width: 25mm
Thickness: 2mm

SLIDING DOOR GEAR

Sliding door hardware is ideal for barn conversions, period properties or simply for a unique feature in the home. Suitable for internal doors weighing up to 80kg, the system creates a traditional look for sliding wooden doors with the exposed steel straps fastening down the front of the door to support the rustic finish. The beautifully crafted barn door style hangers run smoothly across the flat bar track.

A - TIP: Sliding hardware is a great way to fit a door when space is limited or when opening in/out would be impossible due to restrictions.

BEAN THUMBLATCHES

Traditionally used on a ledge and braced door, a thumb latch set is a decorative door latch with a thumb shaped lever. When the thumb shaped lever is pressed down this operates a thumb bar which passes through the door, this lifts the latch bar on the opposite side causing it to open.

Our blacksmith thumbblatches are hammered to shape from mild steel using the traditional manufacturing method of an anvil and fire. Once the mild steel thumbblatch has been hand forged it is finished in our factory in our available finishes, which includes beeswax, external beeswax, black powder coated or pewter patina. The end result is a strong, beautifully detailed product ideal for any traditional project.

Our bean thumbblatches are offered in a variety of options, including standard, heavy for larger doors, xl for thicker doors and slim for finer doors.

We also offer matching penny end T hinges and bean 'D' handles.

FACT: The thickness of your door is important when ordering a thumbblatch as the 'thumb bar' passes through the door & allows opening from both sides.

MEDIUM BEAN THUMBLATCH

Handle Length: 210mm
Thumb Bar Length: 140mm
Latch Length: 190mm

GOTHIC THUMBLATCHES

Traditionally used on a ledge and braced door, a thumb latch set is a decorative door latch with a thumb shaped lever. When the thumb shaped lever is pressed down this operates a thumb bar which passes through the door, this lifts the latch bar on the opposite side causing it to open.

Our blacksmith thumblatches are hammered to shape from mild steel using the traditional manufacturing method of an anvil and fire. Once the mild steel thumblatch has been hand forged it is finished in our factory in our available finishes, which includes beeswax, external beeswax, black powder coated or pewter patina. The end result is a strong, beautifully detailed product ideal for any traditional project.

Our gothic thumblatches are offered in a variety of options, including standard, xl for thicker doors and our decorative tuscan design.

We also offer matching arrow head T hinges and gothic 'D' handles.

A - TIP: For a traditional look, fit one of our thumblatches with a pair or pair and a half of our T hinges for any of your internal doors.

COTTAGE LATCHES

Cottage latches are often selected for internal use as an alternative to a thumb latch or used externally for entrance and side gates.

The handing of our cottage latches is determined with a simple rule, on inward opening doors/gates, a right hand cottage latch would be required if the door/gate is hinged on the right hand side and a left hand cottage latch would be necessary if your door/gate was hinged on the left. The handing also reflects the hand you would use to operate the latch.

COTTAGE LATCH - LEFT HAND

PRIVACY LATCHES

Privacy latches are only suitable for single side access and are often chosen as a decorative solution to keep cupboard or wardrobe doors closed. Fully reversible for use on the left or right-hand side of any cupboard door.

Our blacksmith latches are hammered to shape from mild steel using the traditional manufacturing method of an anvil and fire. Once the mild steel latch has been hand forged it is finished in our factory in a variety of our finish options. The end result is a strong, beautifully detailed product ideal for any traditional project.

LATCH SETS

Our latch sets offer a simple fastening operated with a small decorative knob which lifts up and down to open and close cupboard doors. The latch bar is restricted by the staple pin or screw on staple provided (the unused pin can be discarded). Suitable for single side access only and fully universal for use on the left or right hand side of the door application.

Our Shakespeare latch is intricately designed and is a highly decorative alternative to thumb latches or cottage latches and will enhance any internal or external setting. This comes complete with two handles, one for either side of the door. On the inward face of the door the ring turn and latch bar should be fitted, along with the provided spindle which passes through the door to connect both ring turns. When the ring is turned this lifts the latch bar to open the door.

LATCH SET

RING TURNS

Our ring turn handles are a simple and effective way of opening doors or gates, they are supplied with an 8mm spindle and require a rebated latch (please find these listed towards the back of our brochure). The spindle is designed to pass through both the door and latch combined, and when the ring is turned from either side of the door this will release the rebated latch.

Our blacksmith latches are hammered to shape from mild steel using the traditional manufacturing method of an anvil and fire. Once the mild steel latch has been hand forged it is finished in our factory in a variety of our finish options. The end result is a strong, beautifully detailed product ideal for any traditional project.

AVON LEVER HANDLES

Our avon lever handles are our signature design and are extremely popular for their simplicity. The lever handle is hammered into shape by hand, giving it a contemporary yet individual edge.

A versatile handle that will work in all properties, whether this be a cottage, barn, apartment or town house. Also very popular for commercial properties.

We have a range of matching avon window furniture also available along with escutcheons and bathroom thumbturns.

A - FACT: It takes nearly two hours for our skilled blacksmiths to hand-forge each and every lever on our Avon range of handles.

AVON LEVER HANDLES

Our avon lever handles are our signature design and extremely popular for their simplicity. The lever handle is hammered into shape by hand, giving it a contemporary yet individual edge. The larger backplate design is french inspired and is a very good choice for feature and entrance doors or where a more striking look is desired.

A versatile handle that will work in all properties, whether this be a cottage, barn, apartment or town house. Also very popular for commercial properties.

We have a range of matching avon window furniture also available.

A - FACT: Handles are produced from a mild steel base material and shaped on an anvil to achieve a traditional hand forged and unique piece of furniture.

REGENCY LEVER HANDLES

Our regency lever collection is a popular choice for many properties and features a simple square edged backplate, which is complemented with a smooth rounded lever.

GOTHIC LEVER HANDLES

Inspired by the medieval period, the Gothic range of handles were the first lever design we manufactured. Decorative by nature and very popular, featuring in many homes across the UK as a well known From The Anvil product.

The lever part of the handle is hammered into shape by hand and is square by design but positioned at an angle to match the gothic design on the backplate.

A - FACT: Due to the strength of the base metal we use, very fine detail and refined shapes can be achieved on all of our hand-forged products.

GOTHIC LEVER LOCK SET

Backplate Size: 248mm x 44mm x 5mm
Handle Length: 125mm
Centres: 57mm
Fixing Centres: 214mm

GOTHIC CURVED LEVER HANDLES

Similar to our original Gothic handles, this range was inspired by the medieval period with the later introduction of a curved lever, offering a more contemporary option.

The lever part of the handle is hammered into shape by hand and is comfortable to operate with its flattened lever design.

A - FACT: This style can be matched up with our peardrop window fasteners and stays to create a suite throughout your home.

TUDOR LEVER HANDLES

The tudor range is one of our most decorative lever designs and a popular choice for internal and entrance doors.

These elegant handles have a fleur de lys motif to the backplate and are individually forged in mild steel on an anvil, enhanced with every hammer blow creating a real work of art.

A - FACT: Handles are produced from a mild steel base material, heated in fire and shaped on an anvil to achieve a traditional hand forged appearance.

CROMWELL LEVER HANDLES

The cromwell range was inspired by our original Tudor collection but designed with a sleek straight lever giving the final product a more contemporary edge. This is one of our most decorative lever designs and a popular choice for internal and entrance doors.

These elegant handles have a fleur de lys motif to the backplate and are individually forged in mild steel on an anvil, enhanced with every hammer blow creating a real work of art.

A - TIP: The smoother lever on these cromwell handles gives a more contemporary feel to a very traditional design.

MONKEYTAIL LEVER HANDLES

The monkeytail part of this traditional lever range starts life as a thin piece of mild steel. Our blacksmiths then heat and delicately hammer to form the curly monkeytail shape.

We also offer a large range of matching monkeytail window furniture.

Photo credit: English Shepherd's Hut Co.

A - FACT: Hand forging from mild steel allows our blacksmiths to create fine detail which cannot be achieved with casting methods.

BLACKSMITH RANGE MORTICE/RIM KNOB SETS

All of our blacksmith mortice/rim knob sets are supplied with loose collars to ensure they can be flush fitted to doors or alternatively used in conjunction with a rim lock.

Our mortice/rim knob sets should ideally be used with 3", 4" or 5" locks and latches to avoid the knob sitting too closely to the door edge and frame, as this often results in difficulties when turning and opening doors.

Please note our mortice knob sets are unsprung and will need to be fitted with 'heavy duty' locks and latches. The strength of the spring found in a heavy-duty lock/latch will ensure the knob returns to its original position once released.

A - FACT: Can be used as a stand-alone mortice knob set or in conjunction with a rim lock by removing the rose when fitting.

OVAL MORTICE/RIM KNOB SET

Knob Size: 63mm x 35mm
Projection: 63mm
Rose Size: 60mm
Spindle Size: 8mm

PRESTBURY MORTICE/RIM KNOB SETS

Our prestbury mortice/rim knob sets are available in two sizes, the larger of the two is a great choice for more substantial or feature doors. Manufactured from either solid brass or solid bronze resulting in a heavy, chunky product with a symmetrically classic design to both the knob and rose.

A - TIP: If you are looking to finish your property in soft neutral tones, our polished nickel finish is a recommended option and is a much softer and warmer choice than polished chrome.

MORTICE/RIM & MORTICE KNOB SETS

Our mortice/rim and mortice knob sets should ideally be used with 3", 4" or 5" locks and latches to avoid the knob sitting too closely to the door edge and frame, as this often results in difficulties when turning and opening doors.

FACT: Our period range of knob sets are all hand finished meaning no two products are identical. Please note a bespoke finishing service is available upon request.

MORTICE KNOB SETS

Our mortice knob sets should ideally be used with 3", 4" or 5" locks and latches to avoid the knob sitting too closely to the door edge and frame, as this often results in difficulties when turning and opening doors. Please note our mortice knob sets are unsprung and will need to be fitted with 'heavy duty' locks and latches. The strength of the spring found in a heavy-duty lock/latch will ensure the knob returns to its original position once released.

CENTRE DOOR KNOBS

Our elegant collection of centre door knobs suit all applications from a country cottage, town house or high street shop.

All of our centre knobs are solid and made from either mild steel, solid brass or solid bronze making them very robust and substantial in weight.

All options are supplied with a fixing bolt which is designed to pass through the full thickness of the door and thread into the back of the centre knob. We also include a location pin on the rose to stop any unwanted movement during the life of your product.

For larger feature doors our prestbury centre door knobs are an impressive statement.

BOX & RIM LOCKS

Box locks and rim locks are fitted to the surface of the door rather than being morticed in, along with a surface mounted keep that should be fitted to the door frame.

Our rim knob range is used in conjunction with our rim locks to provide an attractive, high quality finish to any period town house or country property.

We offer a large variety of attractive finishes including, iron, solid oak and solid unlacquered brass.

Please note some of the locks are universal and some are handed.

RIM LOCKS & BATHROOM LATCHES

Rim locks and bathroom latches are fitted to the surface of the door rather than being morticed in, along with a surface mounted keep that should be fitted to the door frame.

Please note some of the locks are universal and some are handed. The bathroom latches have no key and are locked by way of a locking snib from the internal side. Our rim knob range is used in conjunction with our rim locks/bathroom latches to provide an attractive, high quality finish to any period town house or country property.

ESCUTCHEONS

Our vast range of escutcheons are designed as a finishing touch for all locking doors and are used to decorate key holes. We have covered options to mask the keyhole if preferred and we also offer both standard and euro profile to suit different locking systems.

Our extensive variety of escutcheons complement all of our mortice knob designs and are manufactured from mild steel, solid brass or solid bronze.

CYLINDER PULLS

Our rim cylinder pulls are designed to work with a rim cylinder and night latch. As the name suggests this product is used on entrance doors to 'pull' or 'push' the door into the open/closed position.

Our euro door pulls work similarly to pull or push the door into the open/closed position, however they are designed to be fitted with euro cylinders. A euro pull is generally face fixed to the door using wood screws. Additionally, we offer a back to back option which is fixed with a male and female bolt-through system, concealing any fixings from the outside side for added security.

THUMBTURNS

Our thumbturns offer an added feature to any door where further privacy is required, a perfect solution for bathroom doors.

Each of our thumbturns have been designed to complement our range of mortice knob sets and lever on rose handles. We manufacture this range from mild steel, solid brass or solid bronze.

Please note that they can be fitted with a bathroom mortice lock or a stand alone tubular deadbolt. (These thumbturns are lockable from the inside only but in case of emergencies can be opened from the outside with a coin).

A - FACT: Thumbturns allow privacy from the inside of your bathroom/toilet but can also be opened in case of emergency from the outside.

DOOR KNOCKERS

Our extensive selection of door knockers suit a wide variety of doors from timber, composite, upvc and aluminium offering both traditional and contemporary designs. We have options that suit narrower doors with panels/glazing panels which have less room for door furniture to be fitted. We also manufacture door knockers with larger backplates that suit large feature doors.

A - TIP: An attractive feature for your front door in various designs and an alternative to using a door bell.

DOOR KNOCKERS

Our extensive selection of door knockers suit a wide variety of doors from timber, composite, upvc and aluminium offering both traditional and contemporary designs. We have options that suit narrower doors with panels/glazing panels which have less room for door furniture to be fitted. We also manufacture door knockers with larger backplates that suit large feature doors.

LETTERPLATES & COVERS

Our traditional letterplates & covers are an attractive option for numerous door types. For more traditional doors we have a separate system where the letterplate is fitted to the external side of the door and a letterplate cover is fitted to the internal side to reduce drafts. The cover also masks the aperture cut in order to fit the letterplate. This system is available in two sizes to suit large and small doors.

For composite and upvc doors we would recommend using our door letterbox which is supplied as a full kit and contains a tunnel and brushes to reduce drafts and insulate the door. The sleeve inside the letterbox also protects the door from moisture and masks the aperture cutting.

Photo credit: Timber Windows

A - TIP: The design of our letterplate will suit many door styles & our finish options complement all door colours.

CREATE YOUR OWN HAT & COAT RACK

Hat and Coat Racks are brilliant for keeping any entrance space, boot room or hallway tidy. Here are our tips for making your own in nine easy steps...

STEP 1.

Choose your Rack. Be creative with your choice of material. You could use natural timber, painted timber or even an old floor board. We've used a lovely piece of reclaimed oak which has been cut to size, cleaned and sanded to remove any splinters and rough edges.

STEP 2.

Choose your Hooks. Our collection is varied and includes many different styles and finishes. We have chosen to use a mix of hat & coat hooks in natural smooth. Once chosen, place the hooks in your desired position and mark through the screw holes with a pencil.

STEP 3.

Remove the hooks and drill a pilot hole on each pencil mark.

STEP 4.

Replace the first hook and secure using a manual screw driver.

STEP 5.

Measure the distance from the edge of your rack to each hook to make sure they are level.

STEP 6.

Repeat this process to fix all of the smaller hooks on to the rack.

STEP 7.

Now space the larger hooks evenly in between the smaller ones and screw them on. We have chosen to stagger our hooks.

STEP 8.

Once all hooks are secured give your rack a final dust.

STEP 9.

Firmly secure your finished rack to the wall. Once loaded with coats etc. it may become quite heavy!

CABIN HOOKS

Our range of cabin hooks are ideal for safely holding open doors and windows, often used on french patio doors. Alternatively, they can be used to secure shutters in place and keep cupboard doors closed.

3" CABIN HOOK

Hook Length: 73mm

PUSHPLATES & KICKPLATES

Normally used in commercial properties, our range of pushplates and kickplates are a decorative solution to 'push' open doors, adding protection to the door to avoid wear in heavy traffic areas.

Please note our range of push and kickplates are manufactured from mild steel making them very heavy and heavy duty.

A - FACT: Made from solid mild steel gives our plates added strength and durability whilst increasing the life of your door.

PULL HANDLES

Our range of pull handles vary in use from entrance to cupboard doors, depending on the chosen size of pull handle.

Our larger pulls are available in full door length, which make a great feature on more contemporary front doors or on commercial property entrances.

Please note we can supply fixings that enable our pulls to be used back-to-back, and decorative finials to enhance the pulls, achieving a more ornamental finish.

A - TIP: These pull handles can be fitted for single side access or used with back-to-back bolts for access both sides.

CLASSIC CONTEMPORARY

This large period property in South East England has undergone a two-year renovation. The owner has project managed throughout and created a modern family home whilst retaining the building's original character. A contemporary extension has been added to house an indoor swimming pool and allow for 21st-century living. The home owner, a self-confessed perfectionist has paid huge attention to detail during the project and spent time and effort sourcing quality fittings.

From The Anvil products have been used throughout this elegant home in both the original and new parts of the property. Our Beehive Mortice/Rim Knob Sets fit perfectly on the internal doors of the first floor. The spacious kitchen oozes quality and craftsmanship and has been finished with our Natural Smooth Octagonal Knobs and Drawer Pulls. The contemporary yet characterful look is continued through to the light-flooded extension which has been fitted with a selection of our Pewter and Natural Smooth Door Furniture.

case study
the garden house

THE GARDEN HOUSE

This beautifully refurbished garden house in Surrey has recently been transformed into an exclusive boutique hotel and restaurant. The splendid building has been skilfully restored and is adorned with From The Anvil products throughout.

The hotel's elegant rooms have been fitted with our traditional Beeswax Monkeytail Fasteners and Stays which add to the character and create a warm, welcoming feel. Our range of Straight Lever Handles have been used to complement the super stylish bathrooms which are tastefully decorated in dark green hues. The stunning orangery which houses the dining area is filled with light, created by sky lanterns and floor to ceiling glazed doors. All windows have been carefully finished with our authentic Beeswax Monkeytail Fasteners.

All fixtures and fittings have been supplied through our registered Stockist, Period House Store. If this beautiful hotel has inspired you to recreate this look, please visit www.periodhousestore.co.uk for further information and advice.

TIGBOURNE FARM

Tigbourne Farm, on the edge of Chiddingfold is an exclusive redevelopment of a 14th century farmhouse and three 16th to 18th century barns. The extensive plot also houses three early 20th century dairy barns. These ancient buildings feature soaring ceilings, exposed original timbers, inglenook fireplaces, beautifully crafted oak windows and doors, and a mixture of oak and York stone floors. All the properties are Grade II listed and have been expertly restored to accentuate their many original features, all of which have been tastefully complemented with From The Anvil traditional ironmongery. Beeswax and Black Suffolk Latches, T-Hinges, Straight Lever Handles and Shepherds Crook Window Fittings are only a few of the many products used in these desirable properties.

The craftsmanship and meticulous attention to detail that has gone into the renovation of this site over the past five years is evident throughout. Experts in traditional joinery, carpentry and stonemasonry were commissioned by owner Buddy Soubra, who has dedicated vast amounts of time and expense in creating these gorgeous unique homes. Tigbourne Farm is an extremely rare example of a medieval hall structure and is one of only five in Surrey. Mr Soubra felt it was important to choose traditional materials and fittings in keeping with the historic heritage of the buildings to ensure none of the original character was lost.

A case study
cotswolds inns

COTSWOLD INNS AND HOTELS

In 1997, Cotswold Inns and Hotels set out to create an exceptional group of unique hotels in the Cotswolds and surrounding areas. Since first establishing, their collection of properties has continued to grow providing guests with a choice of stylish relaxing retreats, event venues and restaurants.

The Bear of Rodborough in Stroud, the Bay Tree of Burford and the stunning Broadway are just a few examples of the many places that have been sympathetically restored and enhanced with an array of From The Anvil door, window and cabinet furniture. Our products have been used throughout numerous rooms and public areas. Our broad finish choice and extensive product collection has allowed for Beeswax, Pewter and Natural Smooth fittings to be used in different spaces to complement the style and feel of each room.

CABINET KNOBS PERIOD RANGE

Our very extensive range of period cabinet knobs is available in a variety of finishes including polished brass, aged brass, nickel, chrome, bronze, ebony and rosewood.

We have a large variety of styles, all of which match our range of mortice knobs and other products within the From The Anvil range. This collection suits both contemporary and traditional settings and will add individuality to any project.

A - FACT: Our polished brass finish will naturally darken over time, however the finish can be restored to a polished finish if desired using brass polish.

WINDOW FASTENERS & ACCESSORIES

Window fasteners are face fixed window catches used to open or close a window. The tongue of the fastener fits into a mortice plate or hook plate to hold the window closed. A more traditional alternative to the multipoint locking window system.

MORTICE PLATE

MONKEYTAIL FASTENERS

A very traditional style of fastener where the curved shape replicates a monkey's tail. Available in a large variety of options including locking, non-locking and night vent (allowing a fixed open position). These fasteners are also finished in a large choice of colours and all have matching stays available to purchase separately.

MONKEYTAIL FASTENER

Overall Length: 112mm

SHROPSHIRE & REGENCY FASTENERS

The shropshire fastener is heated in fire then hammered on an anvil into a leaf like shape. The mild steel is then finished in our popular pewter patina finish.

Our new regency night vent fastener is a smooth rounded design, offering a simplistic elegance to any property. The night vent option allows the window to be held in a fixed open position.

We also offer a range of matching regency lever handles within this collection.

WINDOW STAYS & ACCESSORIES

The large selection of 'From The Anvil' window stays are used to hold casement windows in a specific open or closed position. Casement pins are fitted on the bottom of the window frame to locate the stay.

Stays can also be fitted to windows for decorative purposes where they are not necessary to keep the window shut/locked.

SLIM PEARDROP ESPAGNOLETES

Our espagnolette window fasteners include a fixed 7mm spindle which is specifically designed to operate a stand alone window lock or a full length espagnolette window locking system.

Our range of peardrop espagnolette fasteners offer a sleek but traditional looking product with all the benefits of a modern and secure configuration. As the name suggests the 'slim' backplate allows this product to be used on windows with width restricted profiles. Produced from solid unlacquered brass.

SHEPHERD'S CROOK ESPAGNOLETTES

Our espagnolette window fasteners include a fixed 7mm spindle which is specifically designed to operate a stand alone window lock or a full length espagnolette window locking system.

Our range of shepherd espagnolette fasteners offer a traditional looking product with all the benefits of a modern and secure configuration. Handforged from mild steel, allowing very fine and intricate detail to the shepherd's crook.

A - FACT: It takes our skilled blacksmiths over two hours to hand forge a single avon handle on an anvil.

AVON ESPAGNOLETTES

Our espagnolette window fasteners include a fixed 7mm spindle which is specifically designed to operate a stand alone window lock or a full length espagnolette window locking system.

Our range of avon espagnolette fasteners suit both contemporary or traditional settings, offering all the benefits of a modern and secure configuration. Handforged from mild steel which enhances all hammer blows and fine detail during the making of this product.

FANLIGHT WINDOW FURNITURE

A fanlight window normally refers to a window that sits above a door or another window. Traditional fanlight windows are normally fitted with a fanlight screw opener or fanlight catch which can be operated using a window winder for hard to reach windows.

Fanlight windows tend to be top / bottom hung and opening in. To restrict the opening of the aperture of the window a quadrant or roller arm stay can be positioned at the side of the window and fixed to the frame.

Our range of complementary fittings offer a traditional finish to any fanlight window whether this is new or restored.

TRICKLE VENTS, CANOPIES & GRILLS

To provide ventilation in new or restored windows, a trickle vent can be fitted. This requires a small aperture cut-out in the window, large enough to accommodate the various size vents.

A vent should be fitted to the interior of the window which can be adjusted to an open/closed position to allow continuous or no ventilation.

On the exterior of the window there are two options, a grill being a less intrusive or visible option which is simple to install by screwing over the cut aperture on the external face of the window. Alternatively, a canopy can be fitted externally, this is not flush fitting and will protrude from the exterior of the window. A canopy is incorporated with wire meshing which reduces insects and moisture reaching the inside of the window or property.

CURTAIN POLE FURNITURE

Our curtain pole furniture was introduced to complete our range and allow any project to be fully furnished with From The Anvil products, down to the finest detail.

We offer a broad range of decorative finials catering for all tastes, with a core range of poles, brackets, tie-backs and rings. Our range is handforged which creates very fine detail and texture in the finished products.

Our finials can also be used with our large pull handles instead of using the standard end caps provided.

PENDANT LIGHTING COLLECTION

Our unique collection of pendants reference Britain's great industrial heritage. With four distinctive shapes in a number of different finishes, our lights can be used to transform an array of spaces.

Each pendant is hand spun from solid steel & finished in copper or nickel.

All our lights are made to order in our UK factory. We offer customised pendants and are more than happy to create bespoke colours and finishes if desired.

BRINDLEY PENDANT COPPER

The Brindley pendant is a versatile choice. It can be hung at different levels to brighten certain areas within a room and looks great in a group. The hammered copper interior creates a warm, dappled light and is perfectly complemented by a choice of black and grey matt exterior colours. Also available in a selection of subtle accent colours which are finished with a white gloss interior.

All pendants are supplied fully wired with a matching ceiling rose and all necessary fixings. 1.5m of black fabric cable is supplied as standard but LED bulbs with a maximum of 6w must be purchased separately.

A - TIP: Additional lengths of cable & alternative colours can be purchased to make your pendant lights more individual & unique.

BRINDLEY PENDANT HAMMERED COPPER

Diameter: 260mm

BRINDLEY PENDANT NICKEL

The brindley pendant is a versatile choice. It can be hung at different levels to brighten certain areas within a room and looks great in a group. The sleek nickel finish bounces light and creates a contemporary feel. Our nickel pendants are complemented by a choice of grey matt exterior colours.

All pendants are supplied fully wired with a matching ceiling rose and all necessary fixings. 1.5M of black fabric cable is supplied as standard but LED bulbs with a maximum of 6w must be purchased separately.

A - TIP: Grouping pendants together & at differing heights further enhances the look & creates a stunning focal point in any room or entrance way in your home.

BRINDLEY PENDANT SMOOTH NICKEL

HARBORNE PENDANT

The harbore pendant embodies classic British design. It's rounded edges and satisfying proportions make it the perfect focal point in any room. The harbore pendant is available in hammered copper or smooth nickel and also looks great in a selection of subtle accent colours which are finished with a white gloss interior.

All pendants are supplied fully wired with a matching ceiling rose and all necessary fixings. 1.5M of black fabric cable is supplied as standard but LED bulbs with a maximum of 6w must be purchased separately.

A - TIP: Coloured pendants are perfect for introducing an understated accent colour in any room & can be finished in bespoke colours to match your walls or furniture.

- Sold with a matching ceiling rose and all necessary fixings.
- 1.5m of black fabric cable is supplied as standard.

YARDLEY PENDANT LIGHTING

The yardley pendant's sleek silhouette creates a more contemporary feel. It can be hung as a centre piece or grouped to create a statement. The yardley pendant is available in hammered copper or in a selection of subtle accent colours which are finished with a white gloss interior.

All pendants are supplied fully wired with a matching ceiling rose and all necessary fixings. 1.5M of black fabric cable is supplied as standard but LED bulbs with a maximum of 6w must be purchased separately.

A - TIP: Grouping a mixture of pendant shapes & finishes adds a characterful eclectic look & hanging at differing heights also adds depth.

£250.00	£250.00	£250.00	£250.00

HOCKLEY PENDANT

The hockley pendant echoes the yardley's sleek shape in a larger and more dramatic size. It creates interest on its own and looks fantastic in a line. The hockley pendant is available in hammered copper or smooth nickel and also looks great in a selection of subtle accent colours which are finished with a white gloss interior.

All pendants are supplied fully wired with a matching ceiling rose and all necessary fixings. 1.5M of black fabric cable is supplied as standard but LED bulbs with a maximum of 6w must be purchased separately.

A - FACT: Hammered copper pendants create a warm glow whilst nickel pendants bounce light & create reflections around your home.

ELECTRICAL SWITCHES & SOCKETS

Our comprehensive collection of electrical switches & sockets is suitable for use with our pendant lighting range and also complement our many ironmongery finishes.

We have brought together a number of decorative electrical accessories that we feel are the closest colour and finish match to our handmade ironmongery. See our guide at the bottom of this page to choose what finish best suits your needs.

LOCKS, LATCHES & ACCESSORIES

We offer a range of accessories that are necessary to operate all From The Anvil fittings and that complement all finishes within our product offering.

Our locks, latches & accessories are seen as an important part of our product offering owing to their necessary purpose. Due to the substantial weights of the majority of our products we recommend using high quality locks, latches & accessories.

A - FACT: We can supply our locks and latches with black faceplates and keeps to match the traditional products in our range.

TUBULAR MORTICE LATCH

Forend Size: 57mm (L) x 26mm (W)
Strike Plate: 57mm (L) x 26mm (W)
Tube Size: 22mm (H) x 16mm (T)

- Sold with matching wood screws.
- A standard tubular mortice latch for use with any of our 'sprung' lever latch handles.

2 1/2" BACKSET: 44MM		3" BACKSET: 56MM		REBATE KIT	
91078 £2.50	BRASS	91081 £2.80	BRASS	91076 £8.14	BRASS

FRENCH DOOR MULTI POINT LOCK KIT

Door Height: Min. 1830mm & Max. 2115mm

- Kit includes: Master lock, slave lock, top & bottom shootbolts (x4), all keeps.
- Suitable for securing flush french timber doors. The master lock securely engages into slave mechanisms & automatically deadlocks a slave unit once operated. No need for false (dummy) mullion and a non-handed lock mechanism with reversible sash bolt to minimise stock requirements.
- Accepts a standard 92mm unsprung lever handle, double-sprung 92mm lever handle and euro profile cylinder.
- We recommend using a keyed alike euro cylinder with this lock.
- Supplied with all necessary fixing screws.

GENERAL MAINTENANCE & CARE GUIDE

GENERAL MAINTENANCE

As with any ironmongery on today's market there are general maintenance tips that can be used to keep your products at their best. All of our finishes will last for many years to come but, as with anything, the more you look after it the better it will look!

We recommend periodically oiling any moving parts on From The Anvil products to ensure they perform to their full capacity, especially when fitting externally. Whether fitting internally or externally we advise oiling our products when first installing - this applies to all finishes. We recommend using our 3-in-one oil (22314) for this purpose.

22314 - 3-in-1 Oil - R.R.P. £6.56

BEESWAX FINISHES

Our beeswax finish is the most authentic finish for steel. We apply pure beeswax to preserve the natural colours in the steel and the texture created from the forge, hammer and anvil. This gives a subtle, matt richness to the metal and offers excellent protection when products are fitted correctly.

Due to temperature changes and packaging conditions, a beeswax product may occasionally show signs of a slight white bloom on opening. We recommend you buff the product with a soft cloth which will restore the finish to its intended glory.

To maintain beeswax products, we have 'maintenance wax' (33002) which we would recommend is used from time to time to protect the steel and prevent rusting.

Our external beeswax is very durable and is coated with a corrosive resistant wax to ensure it does not rust when used outside, however we do still recommend that a 'maintenance wax' (33002) is used to coat the product periodically. This will provide additional surface protection from weather conditions and all outside elements.

For external use we recommend using our 'external beeswax' only. For bathrooms or wet properties, we recommend also choosing our 'external beeswax' finish where possible.

Please note that surface rust may occur if standard beeswax is used in damp internal environments. Should this happen, we suggest rubbing the product with 00 grade wire wool and then applying our 'maintenance wax' (33002) with a rag or brush, this will restore the finish and aid protection.

BLACK FINISHES

Our black finish is a quality powder coating which when applied is baked in a high-temperature oven giving it an attractive, durable and corrosion-resistant finish. This finish is very low maintenance and is resistant to moisture, it can be used internally in high moisture areas like bathrooms or kitchens and externally in adverse weather conditions.

Although our black finish has excellent anti-corrosive properties, this should still be lightly wiped over from time to time with an oily cloth to remove the build-up of any harmful deposits that may sit on the surface of the products. This will significantly improve the lifespan of the product and finish. We recommend using our '3-in-one oil' (22314) for this purpose.

73101 - Touch-up Paint - Black - R.R.P. £12.19

If for any reason your black products or screws become scratched through general wear and tear or fitting, we do offer 'black touch-up paint' (73101) which provides a way to fully protect your product again. This is very easy to apply, it is very hard wearing and is a perfect match to our black finish.

PEWTER FINISHES

Our pewter finish is highly durable and goes through many processes during manufacturing to ensure suitability for both internal and external use. This is a very popular corrosion-resistant finish and can be used for many applications.

We recommend that our pewter finish should be regularly wiped over with an oily cloth to remove the build-up of any harmful deposits that may sit on the surface of the products. This will significantly improve the lifespan of the product and finish. We recommend using our '3-in-one oil' (22314) for this purpose.

BRASS FINISHES

Our brass products are manufactured to the highest standards from solid and unlacquered brass. These finishes will naturally age through oxidation.

If desired a bright 'polished' effect can be achieved and fully restored by polishing with a dry cloth or by using 'brasso' (73102).

Our aged brass finish is achieved by accelerating the ageing process during manufacturing and then re-polishing to create a textured finish. This process highlights all detailed areas within the product design by leaving any indentations dark and all surface areas polished to achieve an attractive contrast.

All our aged brass products can be maintained in the same way as our polished brass products by using a dry cloth or 'brasso' (73102) if a bright 'polished' effect is desired on the surface areas of the products.

Because our brass finishes are solid and unlacquered, they are suitable for all applications, both internally and externally. Over time all our brass products will acquire a darker aged patina if they are not maintained by polishing. This is a preferred option for many and a more natural living finish.

BRONZE FINISHES

All of our aged bronze products are manufactured from solid bronze which starts life as a bright copper finish. We darken our bronze finish by accelerating the ageing process to achieve a rich dark bronze colour and distinction that only bronze possesses.

Our solid bronze products require no maintenance and will naturally lighten during use and oxidation. If a lighter finish is desired immediately, this process can be accelerated by polishing with a dry cloth. This will also make the appearance of our bronze shiny, if this is not desired then we recommend you leave your product to naturally wear.

Bronze is a living finish and due to the high copper content, it contains natural anti-bacterial properties which avoids the need to clean the finish regularly. See our bronze articles for further information.

NICKEL AND POLISHED CHROME FINISHES

Our nickel and polished chrome finishes are also unlacquered, they are manufactured from a base metal of solid brass. It is recommended that these are dry polished from time to time to reduce finger marks and any dirt that gathers on the surface.

WOODEN FINISHES

Our rosewood and ebony finishes are manufactured using high quality and hard-wearing timber. These finishes can be kept to these high standards by way of a simple maintenance routine using our 'maintenance wax' (33002). We recommend regularly waxing your timber products to maintain the vibrancy of the wood and to provide overall protection.

These products have been designed for internal use but can be used externally if well maintained with our 'maintenance wax' (33002).

OTHER FINISHES

For all of our other finishes which do not have a specific mention or listed care instructions, we always recommend the same maintenance routine, using '3-in-one oil' (22314) on all moving parts when first purchased and periodically afterwards. This will keep

the product working to its optimum.

To keep the finish in its original condition wipe with a slightly oiled cloth when first installed and at regular intervals during the products lifespan.

WARNINGS

We do not recommend using our products in coastal areas due to the high levels of salt content in the surrounding air. This will rust or tarnish most finishes; only certain grades of stainless steel will not rust in these environments and therefore our products cannot be guaranteed for such use.

Please note that chemicals in wet plaster or paint may rust or tarnish our products. The moisture levels in a newly plastered room are very high, so please only fit your new ironmongery when you have made sure that all new plaster is fully cured and paint has dried.

Do not use any form of chemical cleaner, e.g. oxalic acid or aerosol sprays to clean products, as this can permanently damage and break down finishes.

When painting, staining or plastering we recommend that all ironmongery is removed before proceeding.

Please follow our suggested use for internal and external finishes and avoid using internal finishes for outside use wherever possible. In sheltered areas such as a porch, some internal finishes can be used if desired but only if they are regularly maintained. We still do not recommend this and would be unable to provide any guarantee against the use of internal finishes used externally.

All of our products have excellent anti-corrosive properties if maintained to specific requirements of each individual finish and will last for many years if given just a little regular care.

For further information, please refer to our finish guide or website www.fromtheanvil.co.uk

ADVICE

We supply our quality products through a network of registered Anvil Stockists throughout the UK. If you need any advice or have any questions regarding any of our products, finishes or care guides please feel free to get in touch with the Stockist you originally purchased from or with us directly. We are always keen to obtain feedback that will help us improve our service.

Alternatively, our website includes a wealth of information including product drawings, detailed dimensions, comprehensive imagery, videos, F.A.Q's and more. Please visit www.fromtheanvil.co.uk or if you have a smart phone why not scan one of our qr codes below to obtain relevant information in an instant.

SCREWS

The fixings supplied with a number of our products are hand-made and therefore a little extra care needs to be taken when fitting. It is always recommended that a pilot hole is drilled (especially into hard woods) for all of our fixings. Ideally it is suggested that you rub the screw with candle wax before fitting to ease the application.

Please take the utmost care when fixing our screws, as many of our products are supplied with traditionally slotted screws. We recommend that along with drilling a pilot hole, a well-fitting screwdriver should be used. Please avoid fixing by way of an impact driver or drill operated screwdriver, due to the hand-made nature of the fixings.

All of our screws can be purchased in quantities of 25 to replace lost or damaged screws, please see pages 241-242 for details. A number of our screw options are also available in round head and countersunk stainless steel if preferred.

73102 - Brasso - Brass Polish - R.R.P. £7.04

THE FORGING PROCESS

HERITAGE

Blacksmiths and their craft play an integral part in our history. During the Medieval period the village smithy was an essential part of every town and a key figure within the community. In addition to tool making they were also called upon to be doctors, dentists and vets on occasions. The mystery surrounding the blacksmith's trade and their dark and fiery working conditions resulted in some villages banning the 'black art'. For a time, smiths were considered to be evil. They worked by heating pieces of wrought iron until the metal became hot enough to shape using hand tools such as hammers, producing armour, weapons, horseshoes and agricultural equipment.

The advances in iron production made in eighteenth century Britain resulted in what we now know as the great industrial revolution. In 1856 Sir Henry Bessemer created a way to standardise the process of making steel. Mild steel was cheaper than wrought iron and easier to produce on a larger scale. This, combined with the reduction in the use of horse and carts saw the role of the village blacksmith decrease. The forging process now took place in larger factories and individual smiths began to focus on more specialist items.

Our process of forging from steel has remained almost unchanged for over one hundred and fifty years. Our blacksmiths heat rods of mild steel in a forge to the optimum temperature for shaping. Colour is an important way of indicating the metal's temperature and workability. As the heat of the steel rises it first glows red, orange, yellow and finally white.

Once at optimum temperature the metal is drawn, bent and shaped by hand on an anvil using tools such as hammers and chisels. Forging from steel in this way gives our products great strength and durability and ensures that each item is a unique yet functional work of art. Once cooled, the pieces are carefully filed to remove any burrs or sharp edges and then drilled, machined and cleaned. Finally, we assemble and finish the ironmongery in a variety of ways to achieve our distinctive black, beeswax and pewter products.

THE AGED BRONZE FINISH

Our solid bronze products are manufactured using traditional methods, and contain a very high percentage of copper. The products are unlacquered and have a matt oil rubbed finish which aids protection. Initially the finish can look very dark. However, aged bronze is a living finish that will gradually oxidize over time, achieving a warm patina and a depth to the colour that simulates a historical quality.

Solid bronze products adapt to their surroundings and lighten with handling, achieving a unique and characterful finish. The dark hue that the bronze initially has reduces where the product naturally lightens with wear, leaving all the fine features of the product defined and prominent. The amount the product will lighten is variable depending on use. If an immediate 'lighter' finish is preferred, this can be accelerated by hand polishing with a heavy dry cloth.

UNLACQUERED BRASS

At From The Anvil we manufacture all of our brass ironmongery unlacquered so that it can easily be restored to its original, highly-polished look. Historically and most prominently in the Victorian era, all brassware was unlacquered and maintained to a highly-polished finish. If an aged look is preferred, the brass can be left to tarnish with use, which over time results in the build-up of a natural patina. The life span of a lacquered brass product is considerably shorter than that of an unlacquered product. There is a strong possibility of the lacquer breaking down which damages the finish and ruins the overall look of the ironmongery entirely.

CUSTOMER HOMES

If you have From The Anvil products taking pride of place in your home and would like to share these with us, please contact us at: casestudies@fromtheanvil.co.uk
